StockBud User Manual

Complete Software Guide with Screenshots

Scope of this Software

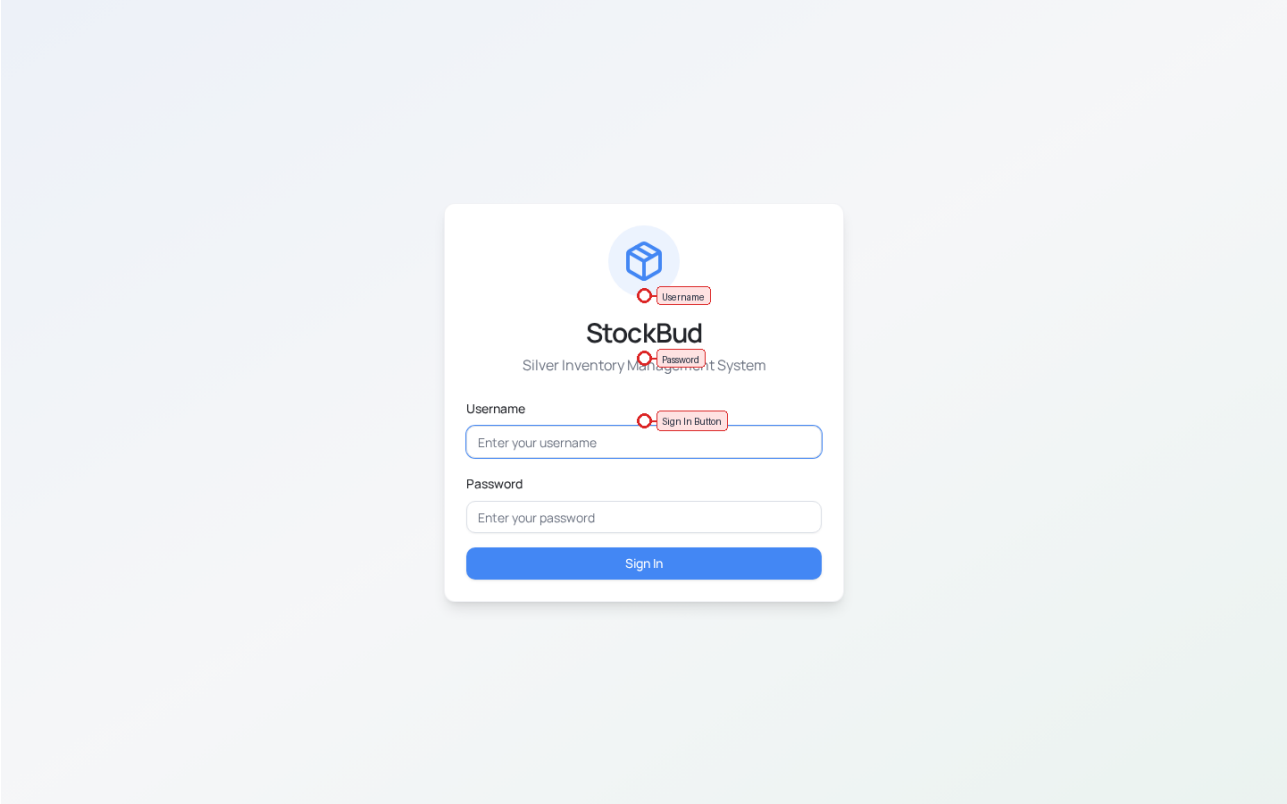
StockBud is an intelligent inventory management system designed for jewelry businesses. It provides real-time stock tracking, profit analysis, seasonal ordering, physical vs book stock comparison, multi-role access control, and AI-powered insights. This manual covers all features with annotated screenshots.

Table of Contents

1. Login
2. Dashboard
3. Notifications
4. Upload Files
5. Current Stock
6. Item Mapping
7. Manage Mappings
8. Purchase Rates
9. Stamp Management
10. Stamp Assignments
11. Polythene Management
12. Physical vs Book Comparison
13. Approvals
14. Item Groups
15. Item Buffers & Seasonal Ordering
16. Orders
17. Party Analytics
18. Profit Analysis
19. Data Visualization & AI
20. Historical Upload
21. User Management
22. History & Activity Log

1. Login

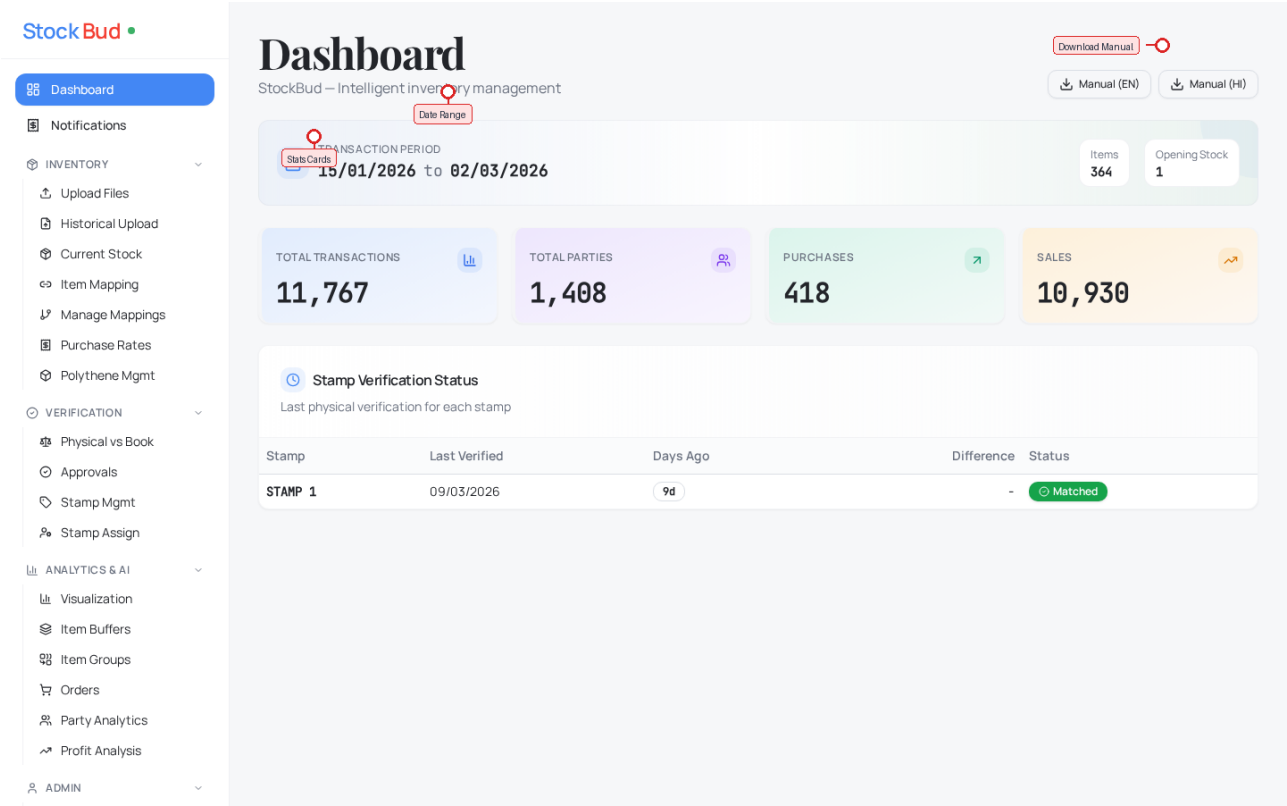
Secure login screen for all users. Enter your username and password to access the system.



- Role-based access: Admin, Manager, Executive, Polythene Executive
- JWT authentication with 18-hour session expiry
- Each role sees only relevant pages after login

2. Dashboard

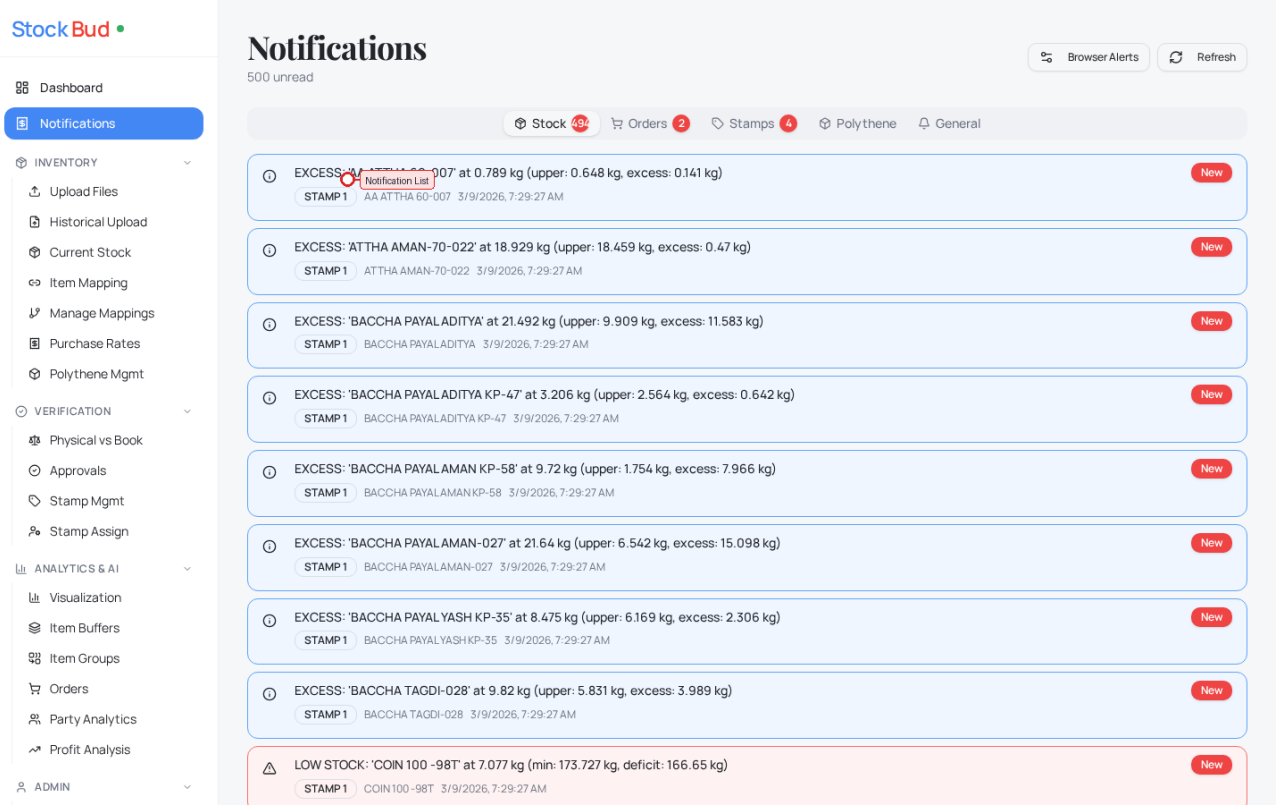
Overview of your business at a glance. Shows transaction counts, date range, and stamp verification status.



- Transaction date range displayed in DD/MM/YYYY format
- Key stats: Total Transactions, Parties, Purchases, Sales
- Stamp verification status with overdue alerts
- Download user manual (English / Hindi) from top-right

3. Notifications

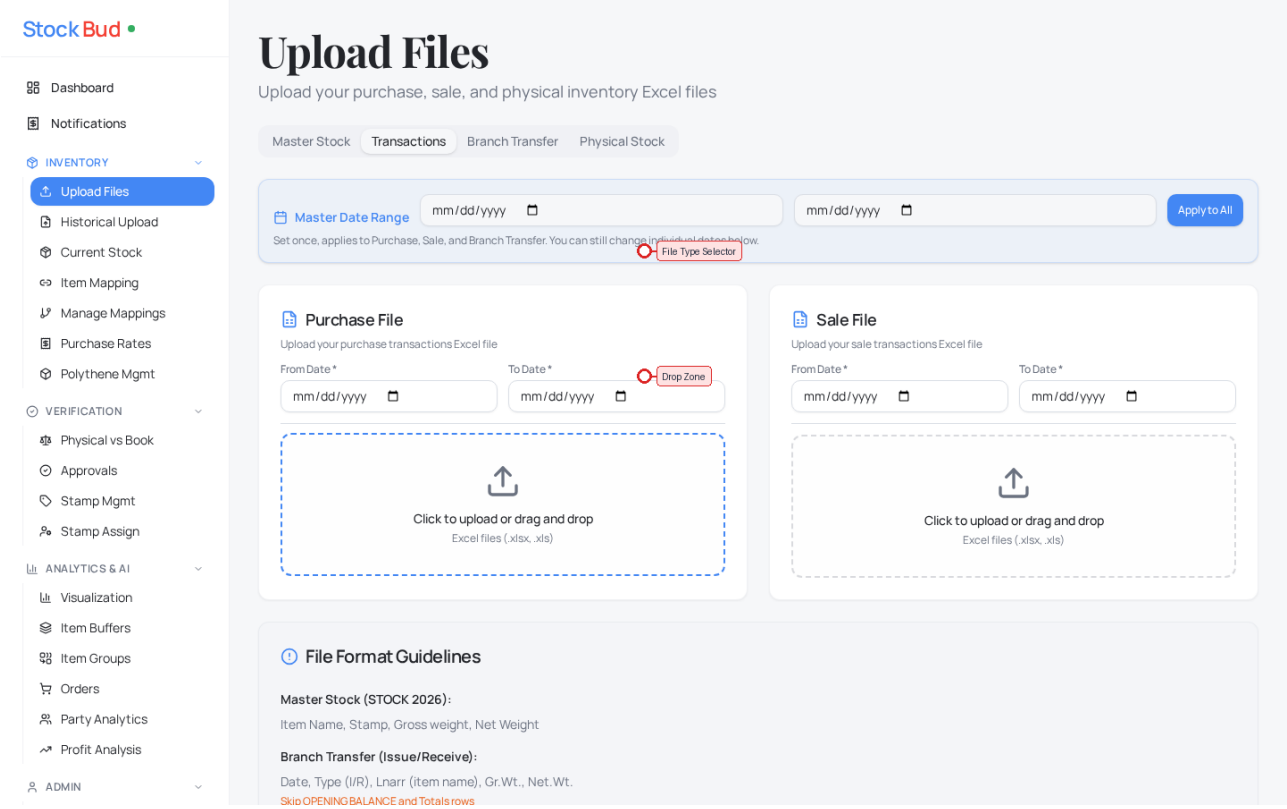
Central notification hub for stock alerts, order updates, and system messages.



- Stock deficit alerts with one-click Quick Order
- Order received/overdue notifications
- System upload notifications

4. Upload Files

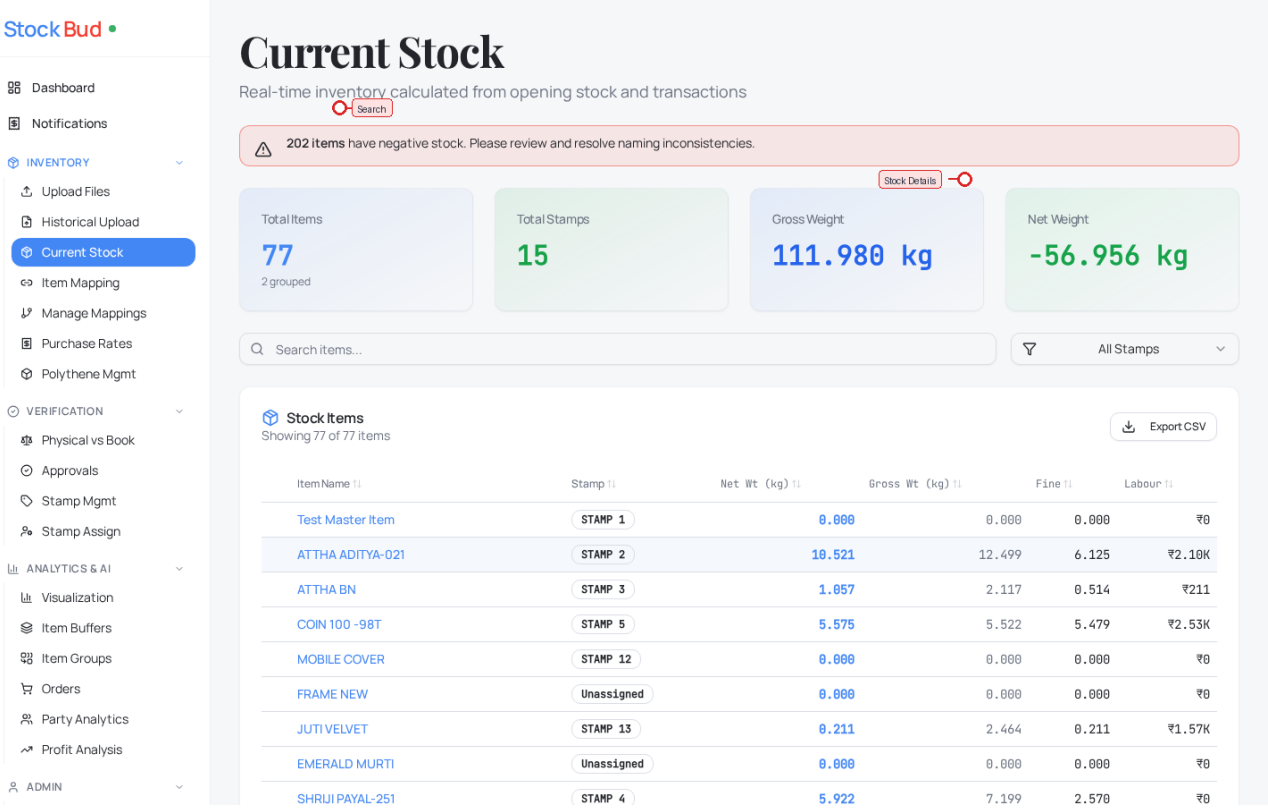
Upload Excel files for opening stock, purchase ledger, and sale ledger. Files are parsed in your browser.



- Drag & drop or click to select Excel files
- Supports: Opening Stock, Purchase Ledger, Sale Ledger, Physical Stock
- Real-time upload progress with serialized queue
- Files processed client-side — server never overloads

5. Current Stock

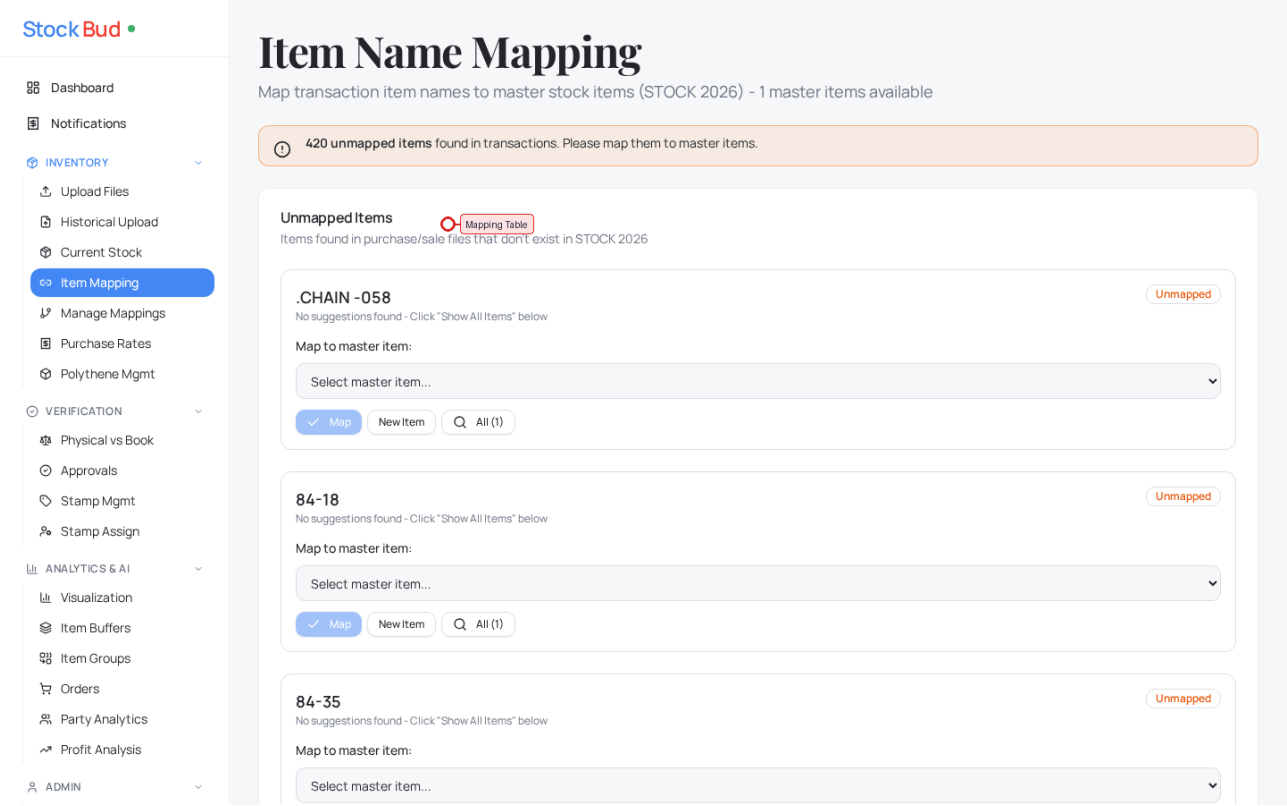
Real-time view of all inventory items calculated as: Opening Stock + Purchases - Sales.



- Stamp-wise grouping for each item
- Search and filter by item name or stamp
- Negative stock items highlighted in red
- CSV export for all data

6. Item Mapping

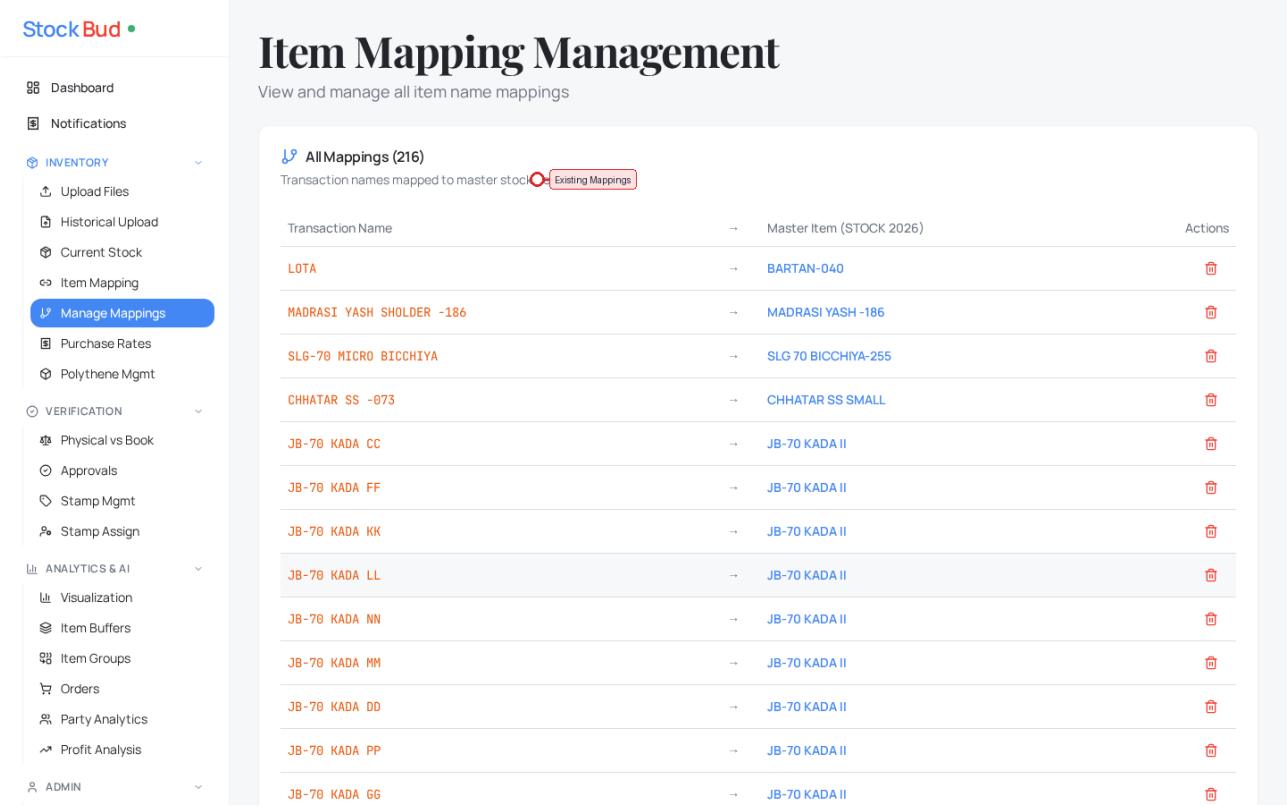
Map raw transaction names to master item names to resolve naming inconsistencies.



- Auto-detect unmapped items from transactions
- Map e.g. 'JB-70 KADA CC' to 'JB-70 KADA II'
- Bulk mapping support

7. Manage Mappings

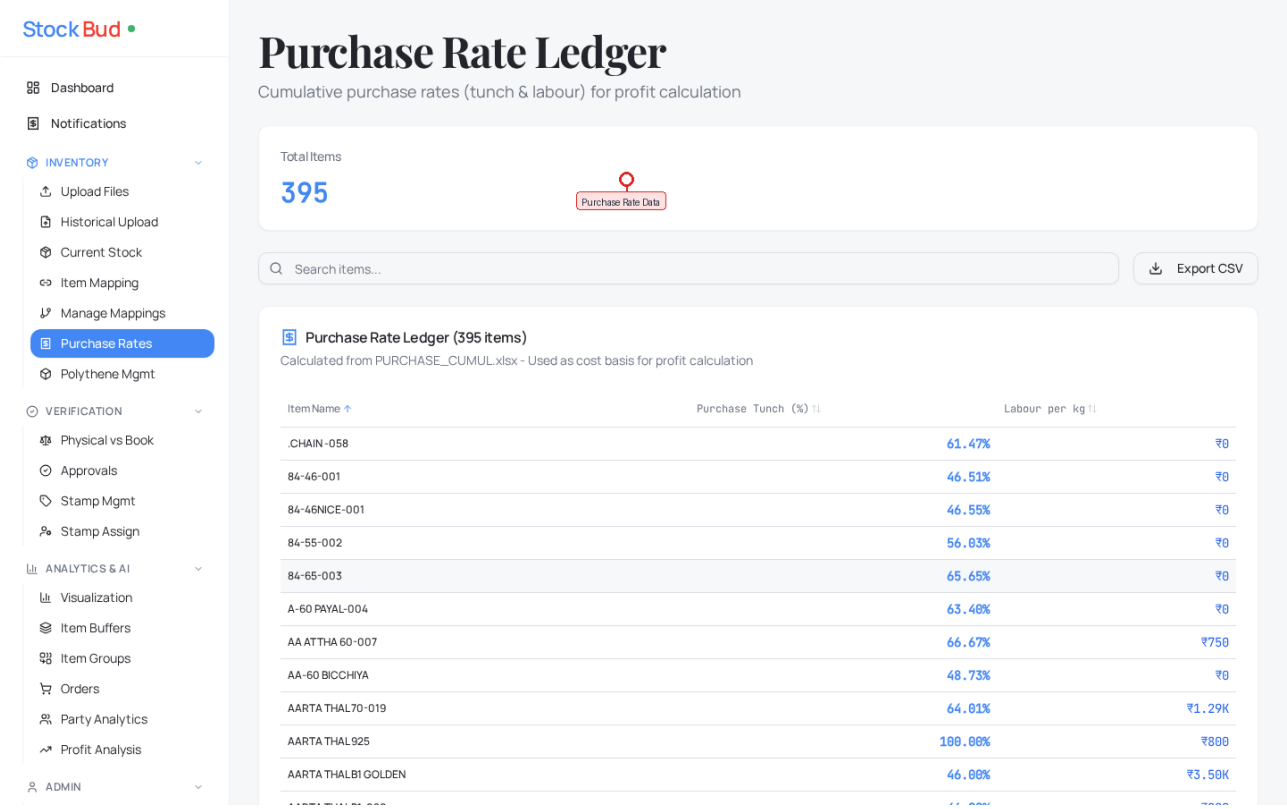
View and edit all existing item name mappings.



- Delete incorrect mappings
- Search across all mappings
- See which transaction names map to which master names

8. Purchase Rates

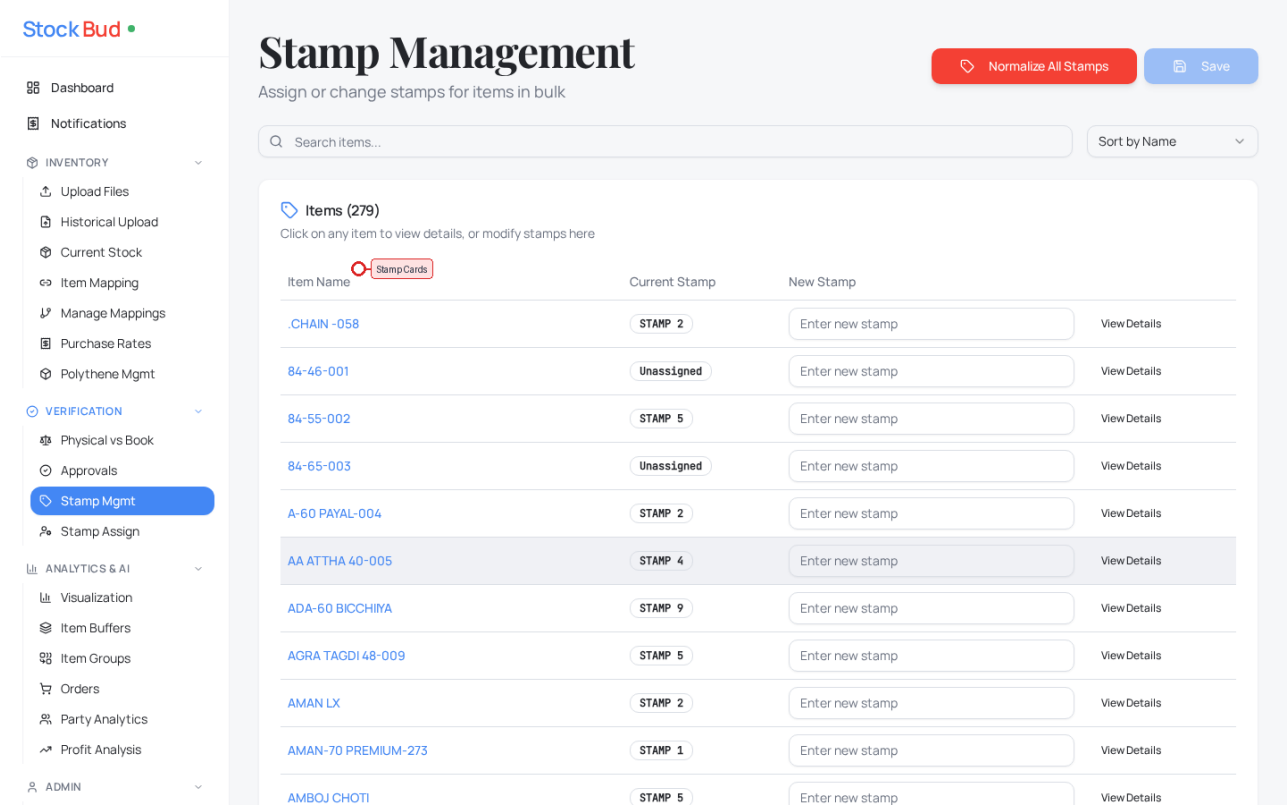
View cumulative purchase rates from the purchase ledger, used as cost basis for profit calculations.



- Shows average rate, tunch, and labour per item
- Automatically calculated from uploaded purchase data

9. Stamp Management

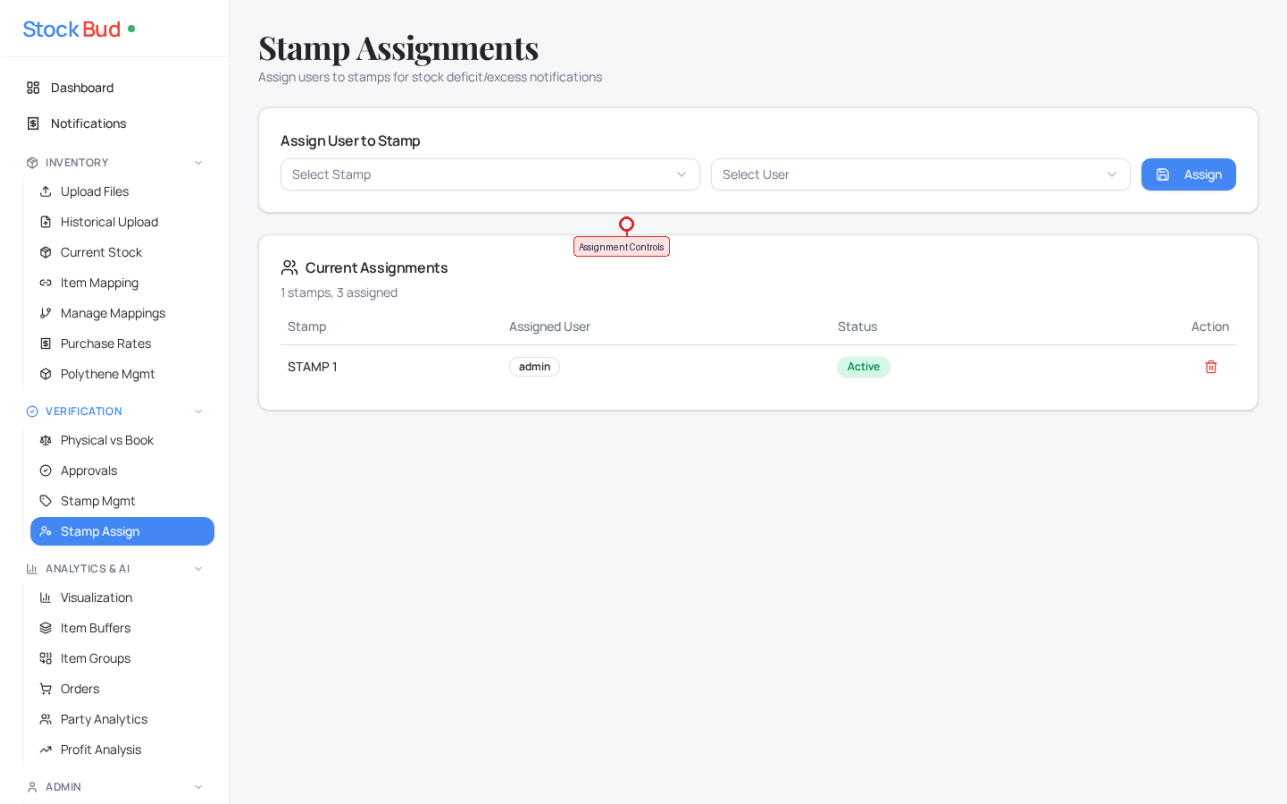
Stamps represent physical trays/sections in your warehouse. Click any stamp to see its items.



- See all items in each stamp with total stock
- Click a stamp to drill down into item details
- Verification tracking per stamp

10. Stamp Assignments

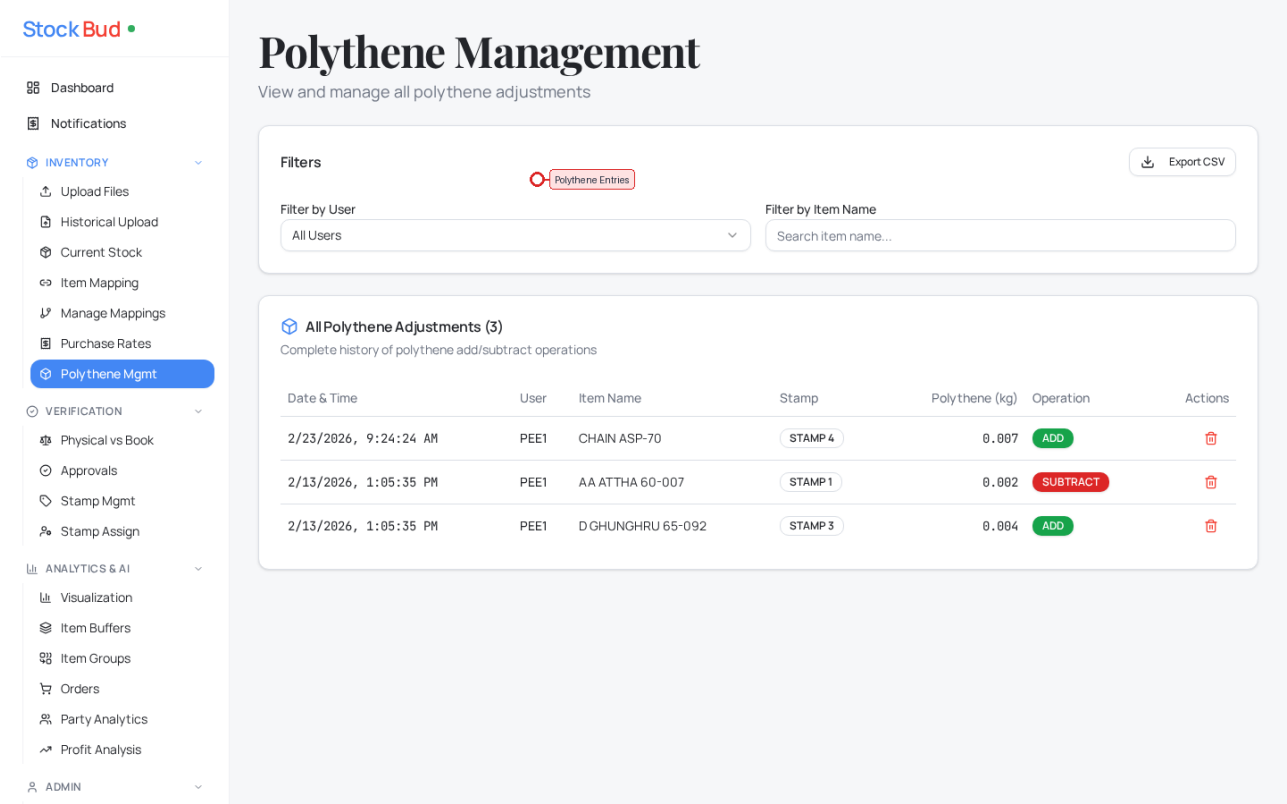
Assign stamps to sales executives. Each executive can only enter stock for their assigned stamps.



- One executive per stamp
- Admin controls all assignments

11. Polythene Management

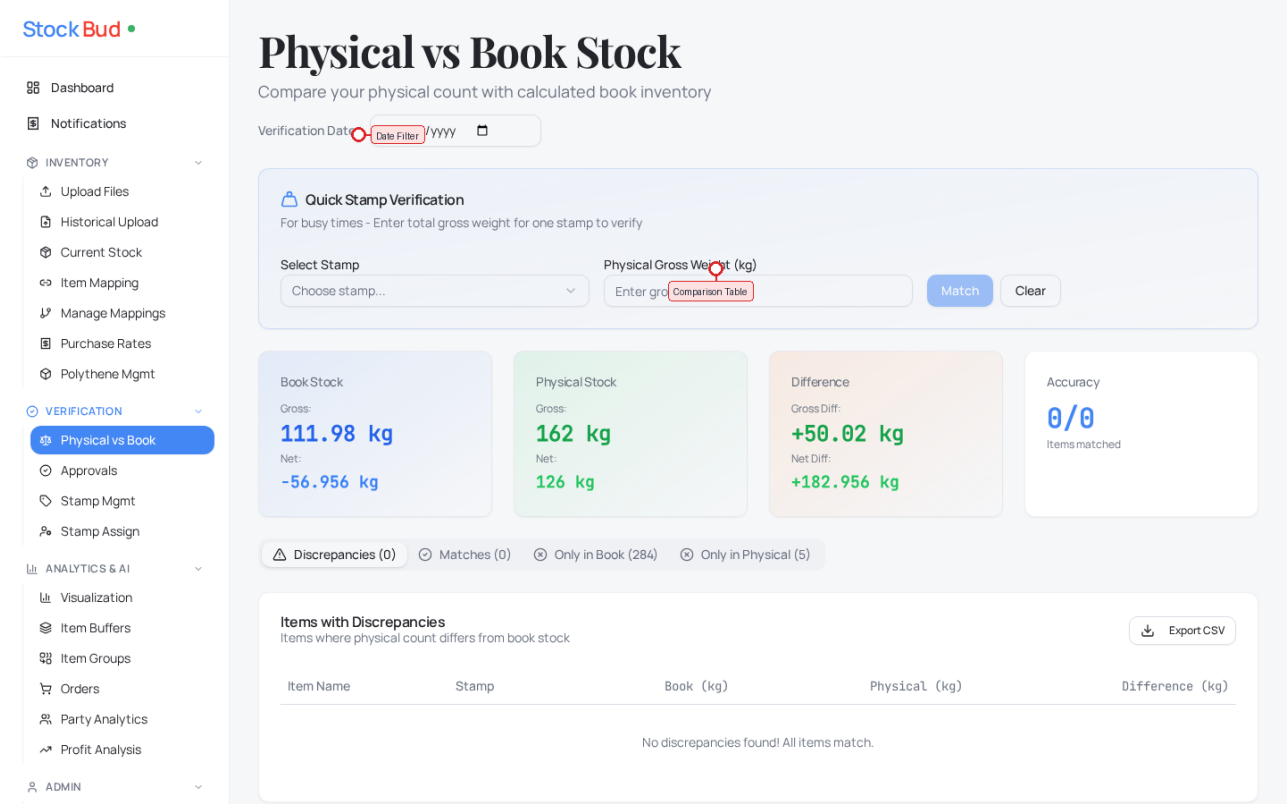
Track polythene weight adjustments across items.



- Polythene executives can add/adjust polythene weight
- Admin sees all polythene entries

12. Physical vs Book Comparison

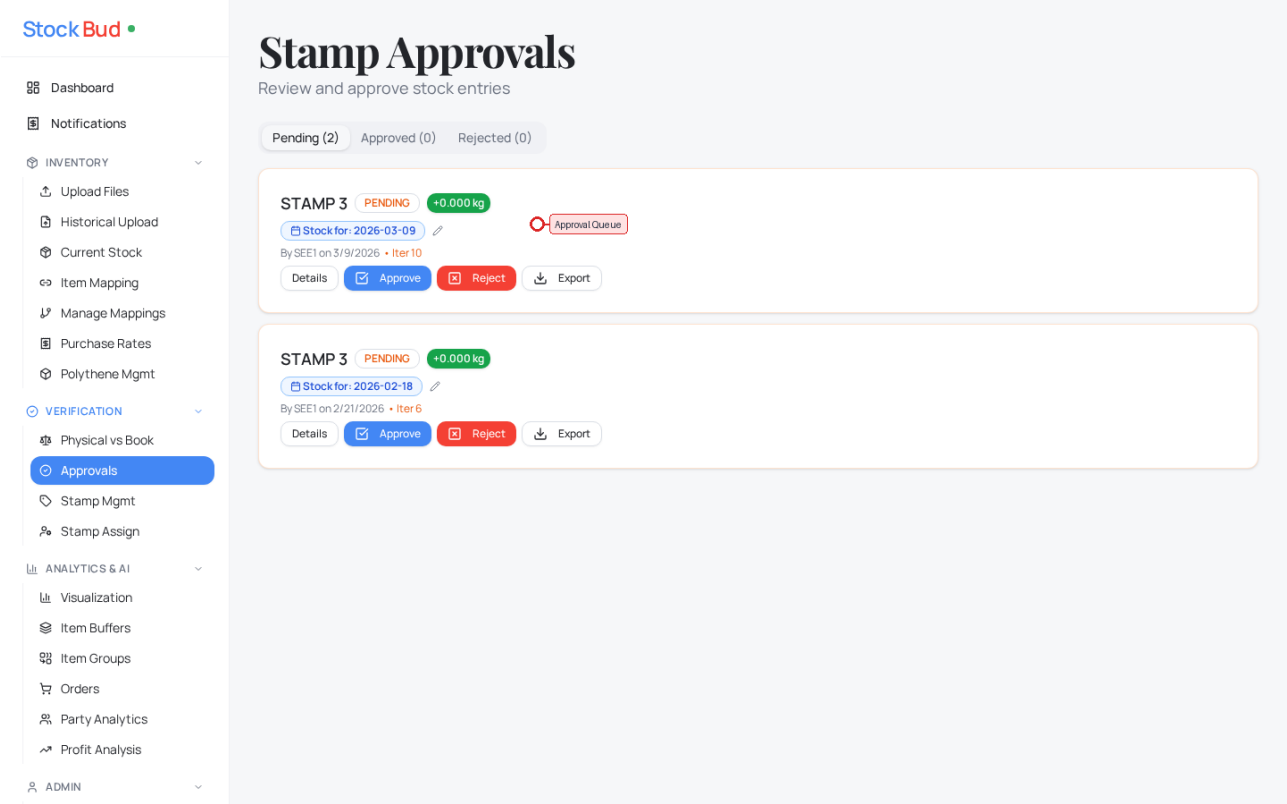
Upload physical stock and compare it against calculated book stock to find discrepancies.



- Date-scoped comparison — each date is independent
- Shows differences with gross/net weight deltas
- Partial update preview with approve/reject workflow
- Stamp-aware matching with ambiguity detection

13. Approvals

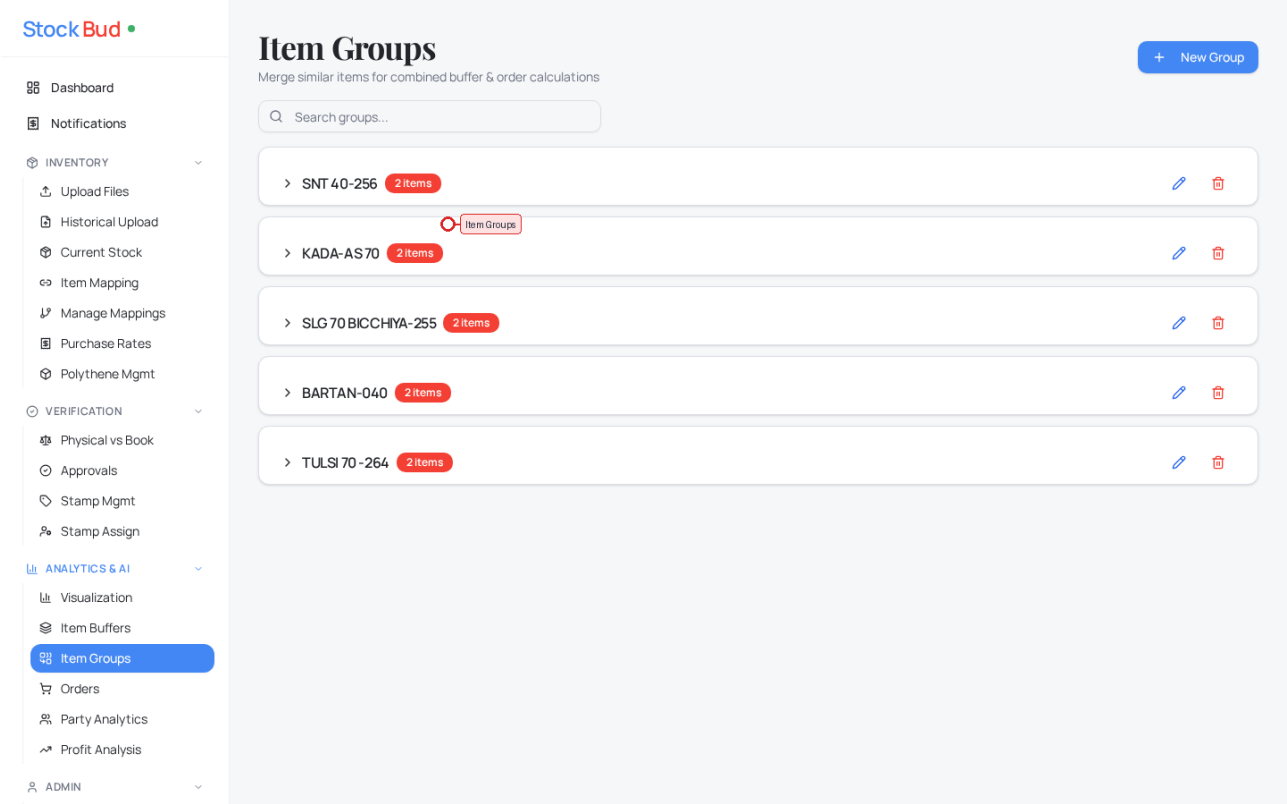
Manager/Admin approval queue for stock entries submitted by executives.



- Approve or reject executive stock entries
- See who submitted and when

14. Item Groups

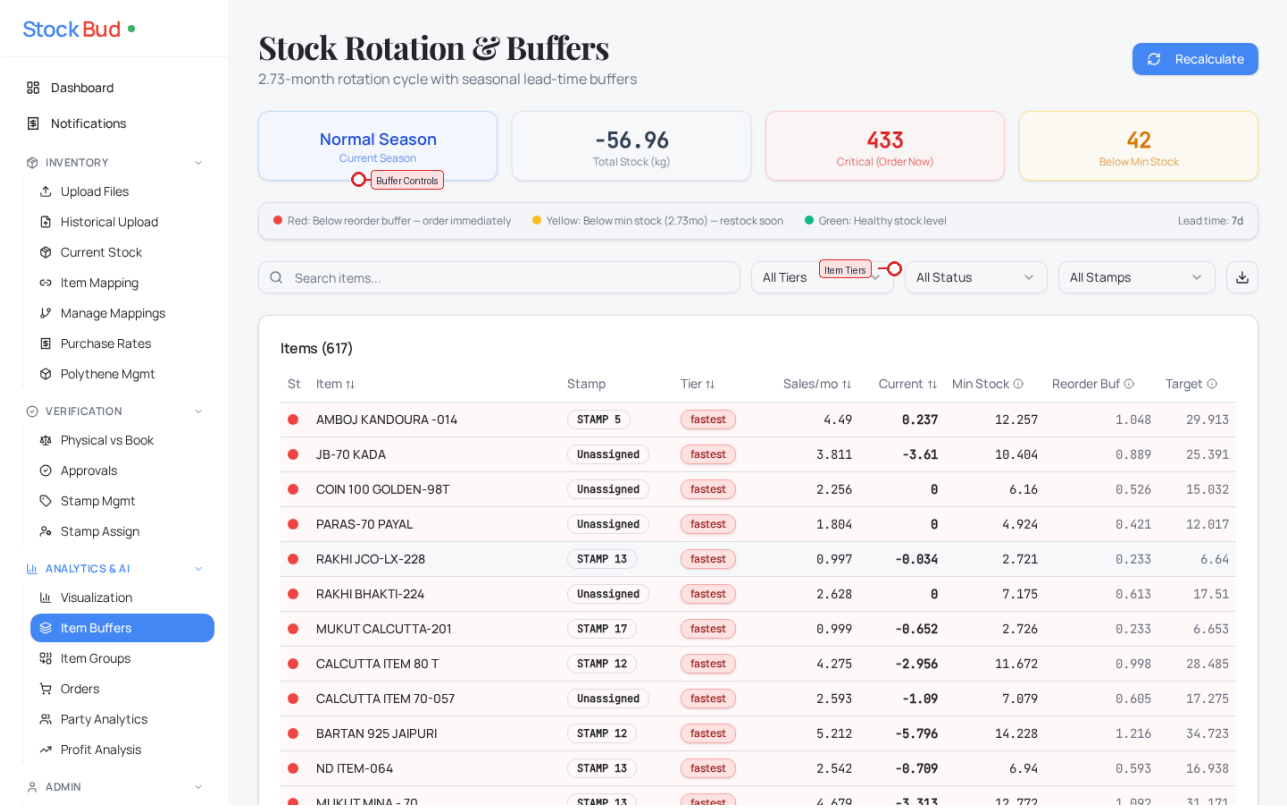
Merge interchangeable items so their stock and sales are combined under one group leader.



- Group leader appears in Current Stock, Buffers, Orders
- Auto-detect groupable items from mappings
- Consolidated numbers across group members

15. Item Buffers & Seasonal Ordering

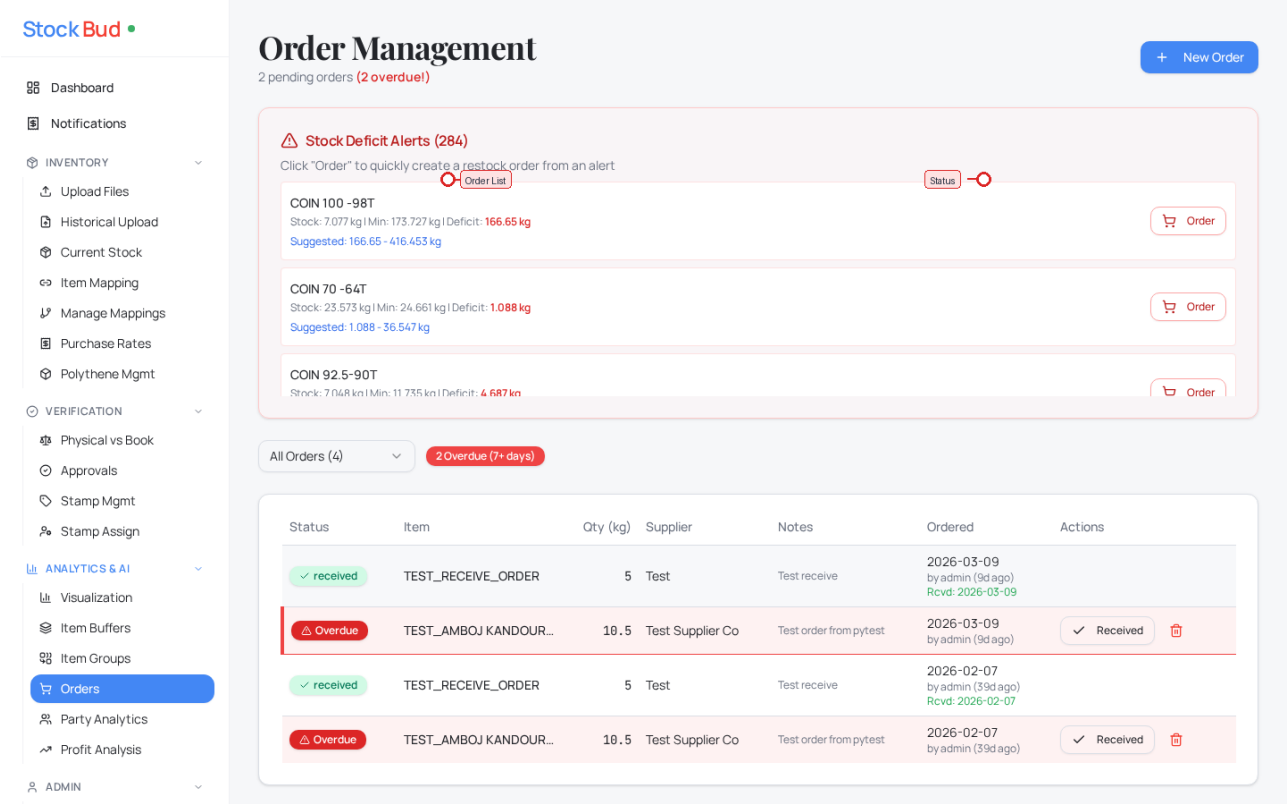
Auto-categorize items into velocity tiers and calculate smart buffer levels with seasonal adjustments.



- Tiers: Fastest, Fast, Medium, Slow, Dead
- Indian festival awareness: Diwali, Akshaya Tritiya, Wedding Season
- Season boost up to 1.5x during peak periods
- Red/Green/Yellow status for stock health

16. Orders

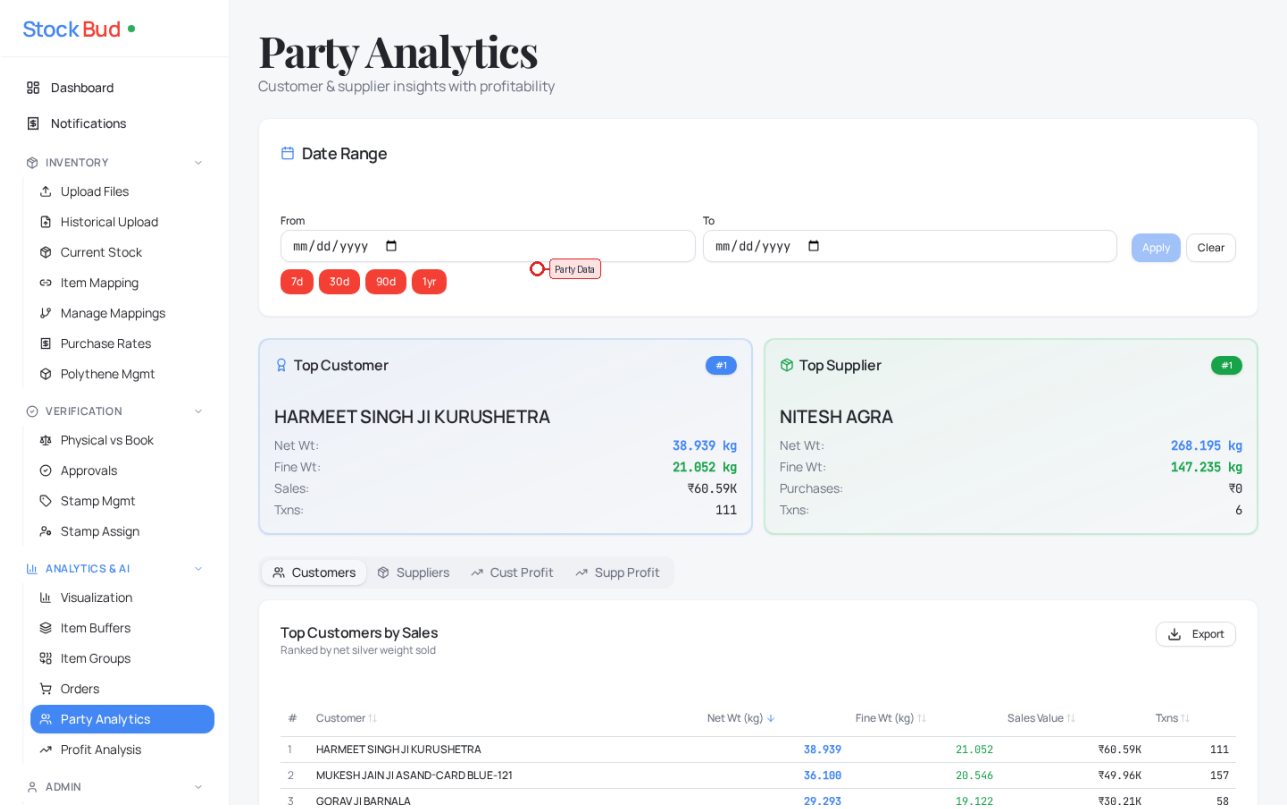
Track orders from creation to receipt with overdue alerts.



- Quick Order from stock deficit alerts
- Suggested quantity range from buffer calculations
- Overdue orders (7+ days) highlighted in red
- Status tracking: Ordered to Received

17. Party Analytics

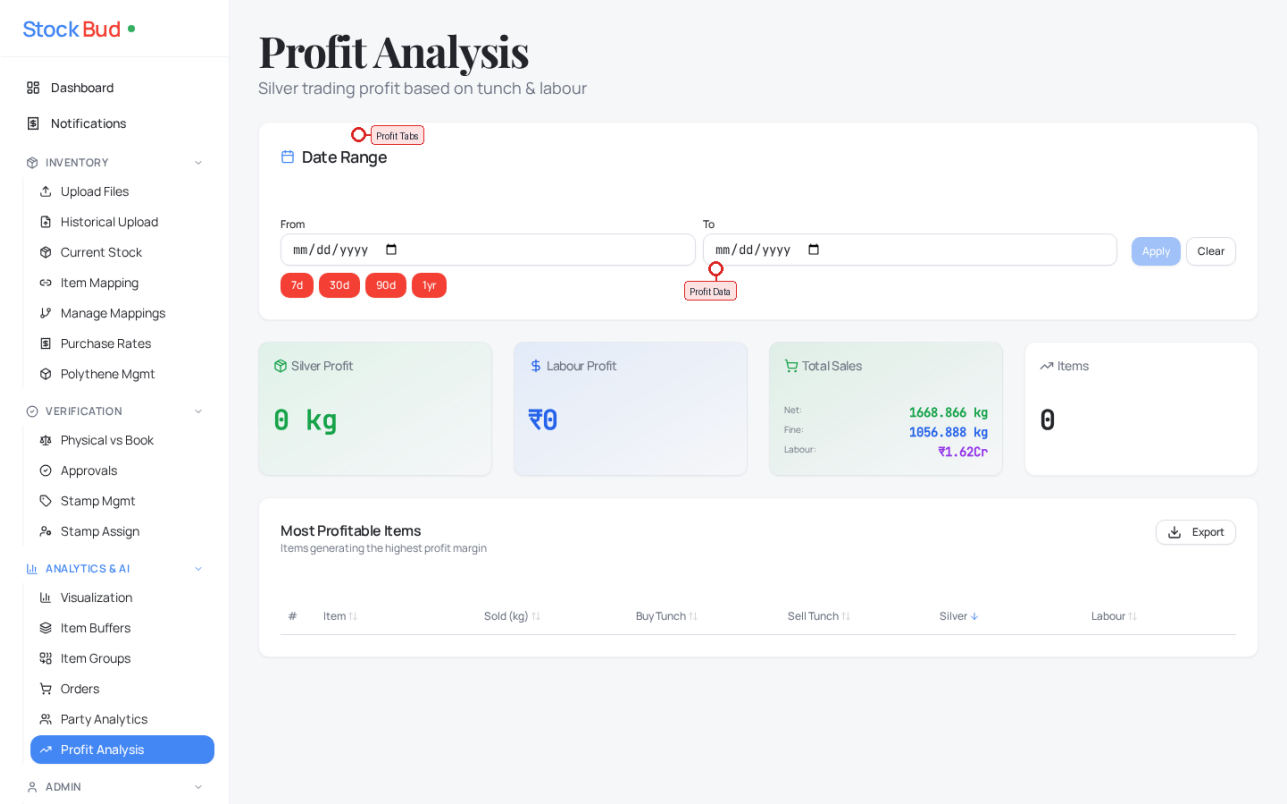
Customer-wise and supplier-wise transaction breakdown with volume analysis.



- Total weight traded per party
- Transaction counts and average rates
- Top customers/suppliers by volume

18. Profit Analysis

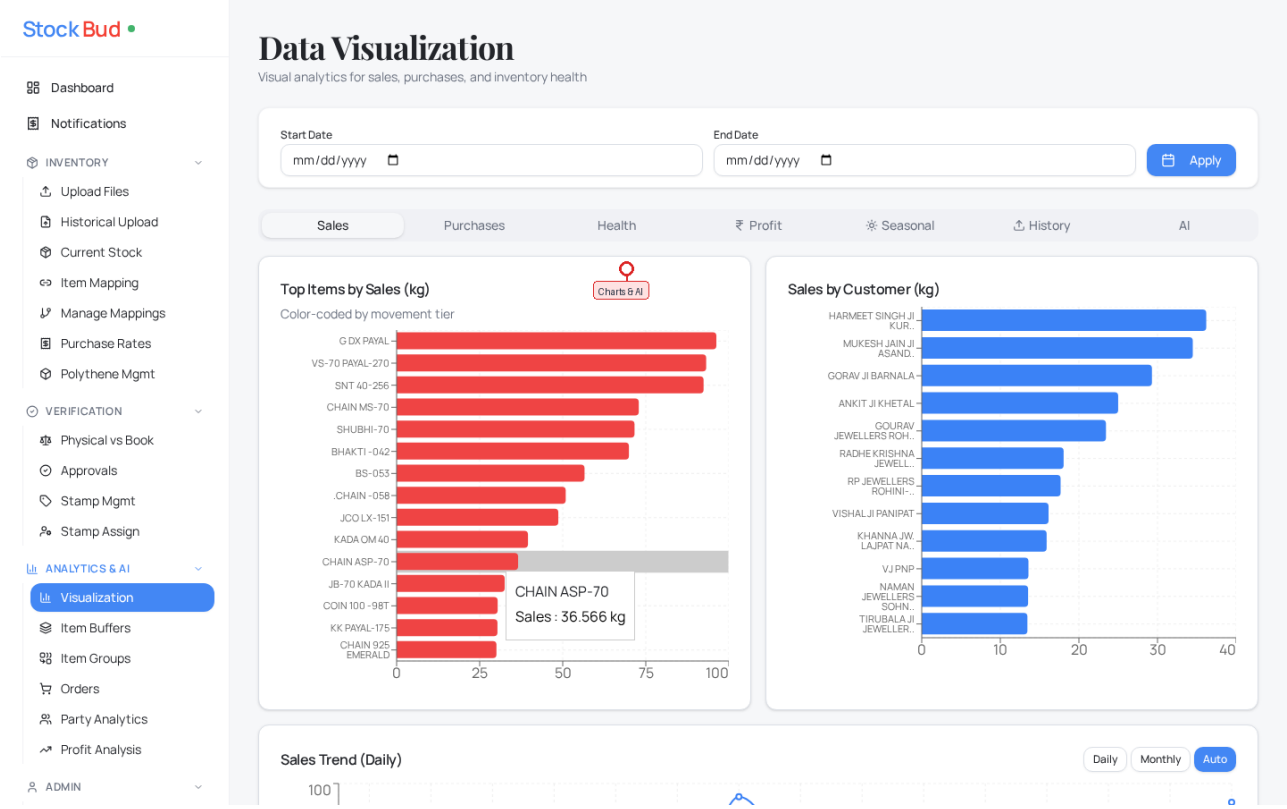
Calculate silver profit (kg) and labour profit (Rs) from your transactions.



- Silver Profit = tunch difference between purchase and sale
- Labour Profit = labour charge difference per gram
- Views: Customer, Supplier, Item, Month, Year
- Historical profit from uploaded data

19. Data Visualization & AI

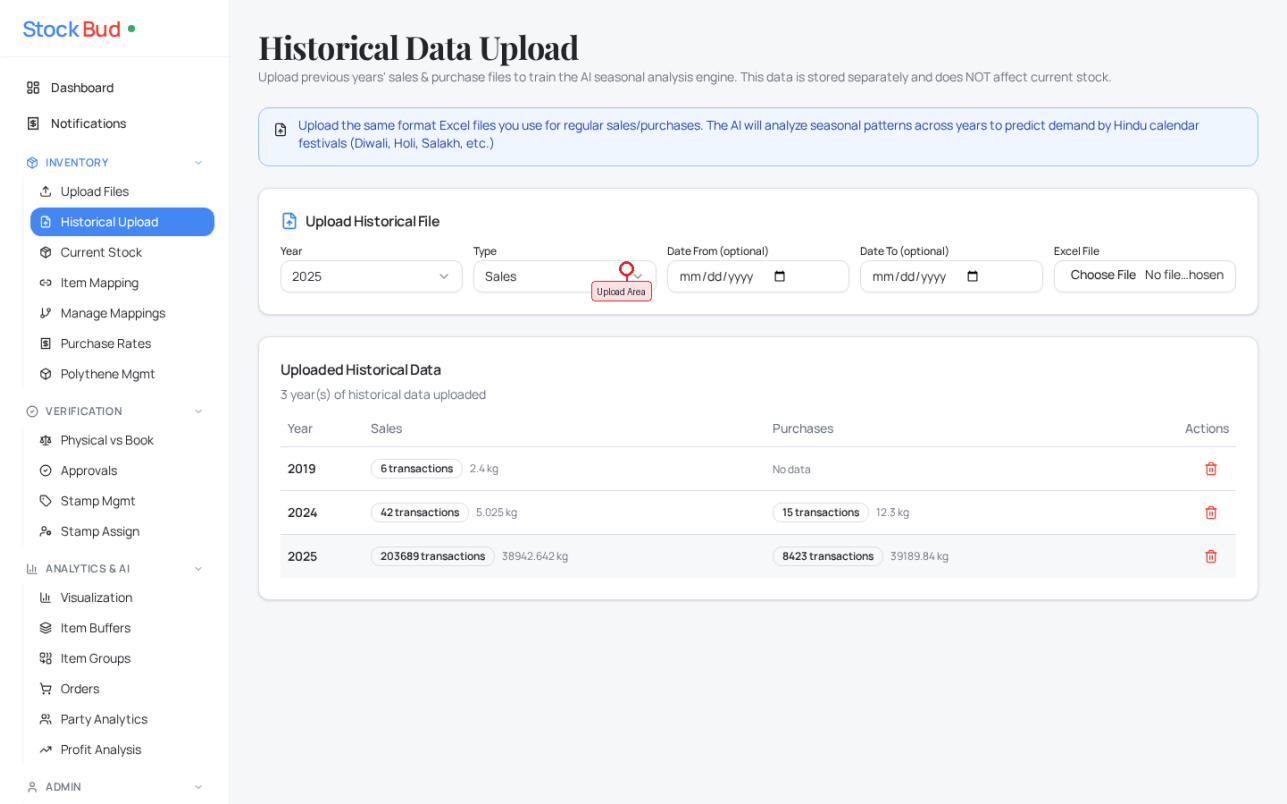
Charts, trends, and AI-powered insights for your inventory data.



- Sales trends, purchase trends, inventory health
- AI Smart Insights — ask questions in natural language
- Seasonal analysis with festival calendar

20. Historical Upload

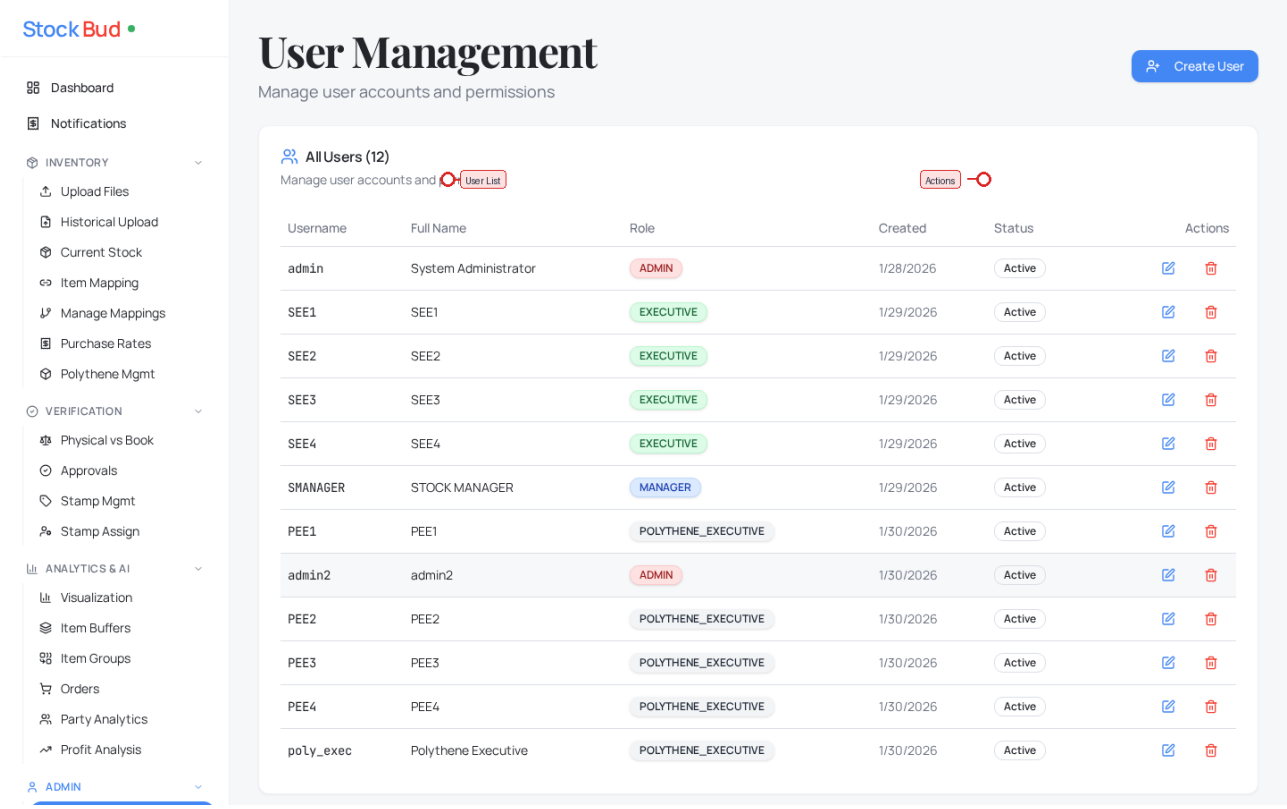
Upload large historical Excel files (200K+ rows). Data is kept separate from current stock.



- Client-side parsing — handles 24MB+ files
- Batch upload with real-time progress
- Historical data does not affect current stock

21. User Management

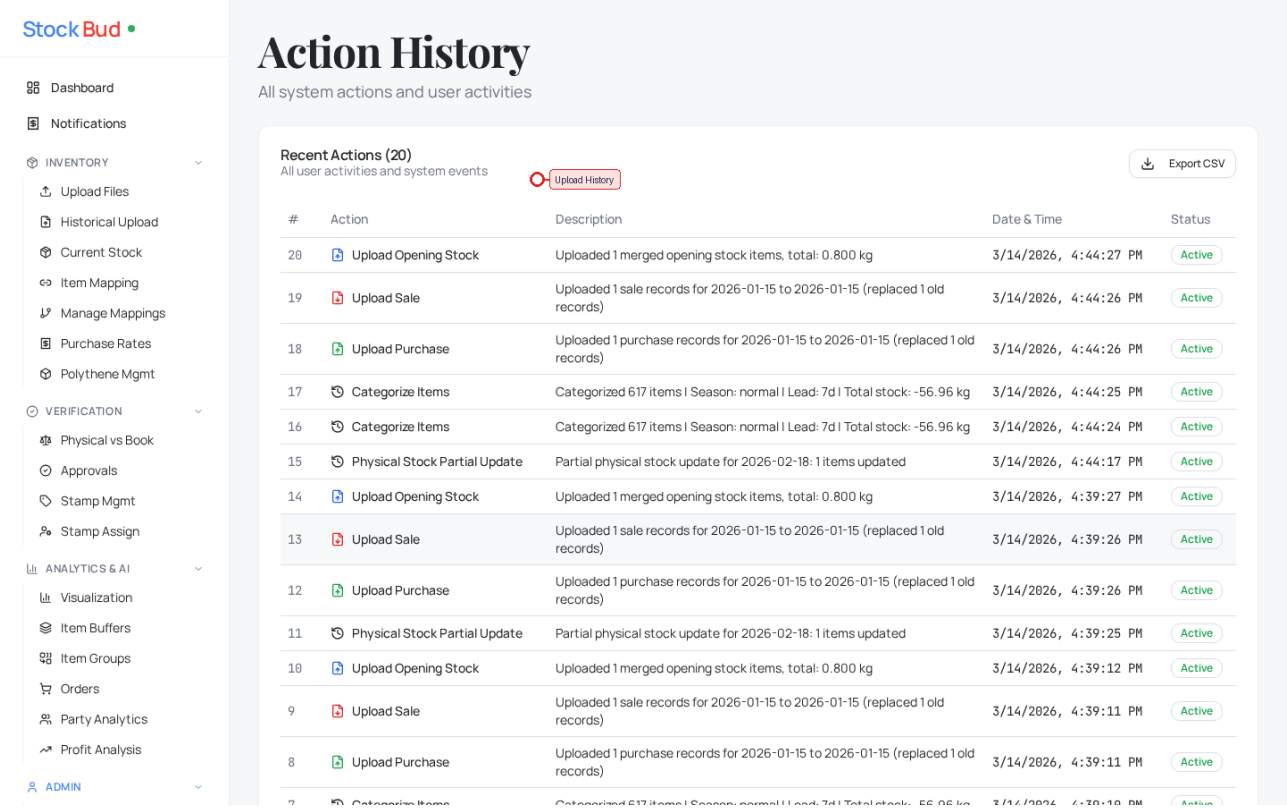
Admin panel to create and manage user accounts with role assignments.



- Create users with specific roles
- Activate/deactivate accounts
- Change passwords and usernames

22. History & Activity Log

Complete audit trail of all uploads and system actions.



- Upload history with undo capability
- Activity log tracks all user actions
- Timestamp and user info for every action
